THREE GENERATIONS of SEED and PLANT GROWERS

Father, Sons and Grandson THE HISTORY OF OUR SEED BUSINESS

- We apologize to our old customers for this reprint.
- We want our new customers to know all about us.
- Maybe our old friends would also enjoy reading it again.

LEONARD CONDON, Jr.
(Vice President)

1st Generation

Beginning away back in the ages of the old Cradle and Rake when everything on the farm was done by hand and back work, Dad started farming with Mr. Greenlee, a pioneer farmer of old reliable Scotch parents.

In those days land of course was cheap, but money was scarcer than hens' teeth and crops very poor on account of inferior seed and lack of proper cultivation; therefore you may know it was mighty hard sledding for a good many years; still, I guess it was a good thing, for during those lean seasons, when it was hard to produce enough to pay the interest on the mortgage set Dad to thinking and figuring how to make both ends meet, and he concluded the best way out was to use extra care in selecting his seed, breeding it up to the highest standard possible and to spare no labor in preparing and cultivating the seed beds after planting. This worked out well and really was the motive or incentive instilled in him in pioneer days, inherited by us boys that prompted us a few years later under Dad's supervision to engage in the Seed growing business in a large commercial way.

2nd Generation

It was during those early days that John and Leonard were born and as we grew up under Dad's careful instructions we naturally followed his trend of thought, so at the age of 13 we both started working out on a small truck farm at the enormous wage of 40c a day. Well do I remember my first day: The boss started John picking peas and I weeding asparagus, and honestly the rows looked a mile long. We stuck to it though, even if it was hard work, and I'll never forget if I live to be a hundred how proud we were when we took our first pay home to Mother. She, too, was proud of us, for while we worked hard and were dirty, she knew it was honest toil and the folks needed the money, and we were glad to help even though it was only a little.

"As You Sow So Shall You Reap" Well, this went on for a few years, Mother insisting we go to school winters and garden in summer. As time passed we realized more fully the necessity of planting good seeds to produce good crops, for we saw many failures from poor seed; consequently, we went into the seed-growing business on our own account, and today we personally grow on our own farms and rented ones thousands of bushels annually of beans, peas, corn, radishes and other seed crops, so we are still actual farmers and really more so than ever before, and we know full well the necessity and wisdom of planting only the best seeds that grow, for the old proverb, "As you sow so shall you reap," is more in evidence today than ever. Being actual producing farmers and gardeners, we know your needs in seeds and understand your wants, your trials and your troubles, so please do not hesitate to inquire for any information on gardening and farming not given in this book. We are here to serve you, and we want to help you this year to grow **Bigger, Better and More Profitable Crops.**

The Trial Grounds Tell the Truth

On our Famous Rock River Valley Seed Farms at Rockford, Illinois, we conduct one of the most extensive Trials of Vegetables, Farm and Nursery Crops, Flowers, etc., in the country. In closing we want to introduce to you, Leonard Condon, Jr., who, since his graduation from College 10 years ago has been in charge of the Garden and Flower Seed Departments. Looking forward with pleasure to serving you this year, we are,

Yours sincerely,

228 Sugar Beet Klein Wanzleben

Genuine Sugar Beet for Making Sugar

This Beet is the result of years of methodical and persevering selection. It is extremely rich in sugar, thousands of analyses showing that the average percentage of sugar obtained from this variety is about eighteen and its average yield may be stated as from 15 to 16 tons an acre, but crops of 25 to 40 tons per acre have been obtained off it. Flesh finely grained and very sweet. Excellent for milch cows and stock feeders. Oz. 15c; $\frac{1}{4}$ lb. 40c; $\frac{1}{2}$ lb. 70c; lb. \$1.25, postpaid.

227 Giant Feeding Sugar Beet, or Half Sugar Mangel

This magnificent Sugar Beet, while giving nearly as large a yield of easily grown and harvested roots as a crop of Mangels, supplies a food of very much higher nutritive value, the roots for feeding purposes being really more valuable, pound for pound, than those of the very best strains of Sugar Beet, and the yield under equally favorable conditions being more than double. The roots grow partly out of the ground, and because of this and their shape, the crop can be harvested and stored at less expense than any other root crop. We are certain that every one who plants this variety and grows it with care will be much pleased with the crop. Every farmer should try it. 249 Condon's Cannon Ball Cabbage—Earliest of All

17

1 oz. of seed will produce 3,000 plants. 1 lb. for 7 acres.

Condon's Cannon Ball represents the highest achievement in Cabbage breeding, and is the best extra early round headed Cabbage we have ever grown or seen. In uniformity to type and evenness in early maturing it is a marvel. Every row and every head in a row looks as nearly alike as if all had been turned out of a mold. Its evenness in maturing has proved it a great favorite with all Cabbage growers as they appreciate the great importance of being able to clear off the ground at one cutting, especially where room is required for a second crop. The plants are of compact, stocky growth, producing large, solid, ball-shaped heads which average about five pounds in weight, and are of the very finest quality, smooth with fine veins and small core. Will yield a greater crop per acre than other Cabbage of which we know. For both private gardens and marketing this is the **One Best Early Cabbage** and the **Greatest Money Maker** of all. Its remarkably fine quality and tenderness, whether cooked or sliced for slaw or salad wins friends wherever tried, while for marketing its handsome saleable appearance and uniformity in maturing the crop has caused it to be in great demand. Last year we sold out our entire supply and received hundreds of unsolicited testimonials from customers from all over the country, from Maine to California and from Canada to the Gulf of Mexico. Send your orders early for some of this grand Cabbage. Pkt. 15c; ½ oz. 35c; oz. 55c; ¼ lb. \$1.15; ½ lb. \$2.00; lb. \$3.75, postpaid.

For Critical Market Gardeners and Private Planters
—The Earliest and Sweetest of All Table Carrots
Used Annually by the Largest Planters

Danvers carrots have been the standard for over fifty years and we need not try to offer any proofs as to their popularity. Carrot-breeding is in about the same class as stock-breeding, and if same is not kept true, will deteriorate very quickly. We have endeavored to do more than keep the old parent sort true, and have actually bred up the quality of Danvers Carrot to such perfection that the old parent sort would be ashamed of itself. To distinguish our sort from others, we have termed our strain Condon's Select Danvers. Same has been bred for quality and for yield and on a given acreage it has produced a larger crop of marketable roots than any other garden or table variety. The roots are of a rich orange color, crisp and sweet. Pkt. 10c; oz. 35c; ¼ lb. \$1.15; ½ lb. \$2.10; lb. \$3.95, postpaid.

300 Condon's Champion Prize Winner Stock Carrot

This is the heaviest cropping carrot grown. The flesh is white, solid, crisp and very sweet; the roots are short and very heavy at the shoulder, which allows them to be harvested very easily. 723 Condon's Silver Queen or White Bantam

723 Condon's Silver Queen or White Bantam

The Best, Largest and Sweetest Extra Early White Sweet Corn is What our Customers Say. Ready for Market in This Locality in Early July. Since the Pilgrims settled in Massachusetts, Sweet Corn has been one of the most relished vegetables. Ever since, man has striven to produce a better quality. By crossing various types, improvements have been made, until one would think we had reached our zenith; especially after tasting delicious Golden Rod and Golden Bantam. These were far superior to any previously introduced, "but the color was against them." Once again Nature proved a wonder, for we found in our field of Golden Bantam several ears containing a few white grains. They were selected, planted by themselves, and today we have a distinct type of **White Bantam**, known as our **Silver Queen**. Think of it, a **White Bantam Corn**, which contains all of the sweet lusciousness of the yellow sorts. In habit of growth it excels all other early varieties, being stocky and vigorous. Ears 6 to 7 inches long, frequently bearing four and five good ears on a single stalk. ■ oz. pkt. 10c; ½ lb. 24c; 1 lb. 40c; 2 lbs., 70c, postpaid.

731 Golden Early Market (70 days)

One of the Earliest Yellow Sweet Corns

In our trials Golden Market produced large marketable ears 8 days earlier than Golden Bantam and 3 days earlier than Golden Sunshine, maturing marketable crop in 70 days from time of planting. Ears 8 inches long, 10 to 12 rowed, fine grained, delicious flavor, stalks 4½ feet high. A sure money maker for market gardeners where a matter of 5 to 10 days in marketing a crop makes a tremendous difference in the value per dozen or 100 ears. ■ oz. pkt. 10c; ½ lb. 22c; 1 lb. 35c; ■ lbs., 60c, postpaid.

Hybrid Varieties of Sweet Corn

Hybrid Sweet Corn, the same as Hybrid Field Corn, is more resistant to disease, produces heavier root growth, stands up better, is more prolific and will outyield open-pollinated 50%. If you have had trouble in the growing of Sweet Corn on account of Stewart's disease, then grow these Hybrid varieties and be assured of a big profitable crop.

736 Spancross 13 x 4 (Yellow Hybrid) (65 days)

Follows Spancross in earliness and grows a little taller. Ears are borne well up on the stalk, are 12 rowed, 6½ to 7 inches long and of very delicious flavor.

741 Carmelcross 39 x 13 (Yellow Hybrid) (73 days)

Carmelcross is 4 days later than Marcross and is ready to pick after you have finished with Marcross. The ears will average 7 to 7½ inches in length, are borne well up on the stalk, are 12 rowed with broad, deep kernels of the highest quality.

Earliest of all Evergreens

Has ears fully as large as those of the regular Stowell's and is about five days earlier, while the grains remain tender for a longer period. It's most valuable feature, however, is the extreme paper whiteness of the grains, which makes not only a more attractive ear when served on the table, but is most important for the canner. It retains its whiteness when put up in cans as distinct from the yellowish tinge of the still popular original Stowell's Evergreen. 2 oz. pkt. 10c; ½ lb. 22c; 1 lb. 35c; 2 lbs. 60c, postpaid.

729 Golden Bantam (83 Days)

The Finest Quality, Largest Eared Sugar Corn

Another great feature is the length of time the ears remain "in the milk," the thick husk giving it splendid protection, making it marketable for a longer period of time than any other known sort. In color it is the most perfect Purity White grain corn you ever saw, making it the most attractive ear when served on the table and the most valuable variety for canning, retaining when canned that distinct purity whiteness which makes a big demand for it at good prices even when the markets are loaded with other varieties. 2 oz. Individual heads weigh 2 lbs. each. Pkt. 20c; ¼ oz. \$1.15; ½ oz. \$2.00; oz. \$3.75; ¼ lb. \$13.50; ½ lb. \$25.00; lb. \$48.00, postpaid.

309 New Super Snowball

Even under unfavorable conditions it will head up well, heads forming all at one time, showing a uniformity of size, shape, and type. The plants make a compact dwarf growth. The head is almost round. Has a beautiful pure white, smooth curd. Dry weather does not materially check its growth and therefore is able to resist diseases. Condon Brothers, Seedsmen: I want to tell you I had the best garden this year from your seed that I ever had in my life. It was the first time I planted seeds and had them grow like the pictures in the book. We canned 367 jars including 12 gallon jars. I never had so many pickled Beets in my life. Those Ever-bearing Cucumbers were swell. I had bushels of Tomatoes. The Rhubarb came along fine. Those Midget Peas were delicious. I will think of you when we are eating our Thanksgiving and Christmas dinners. Will send you another order soon.—Thomas Morrilly.

Great 80 day Melon—"Sweetest of All"
Wilt Resistant Strain

Suitable for Shipping One to Three Hundred Miles

There is no melon superior in quality to a good strain of Kleckley Sweets. The bright scarlet flesh is the ideal of water melon quality—firm, crisp, entirely free from stringiness or cotton, and "sweet as sugar."

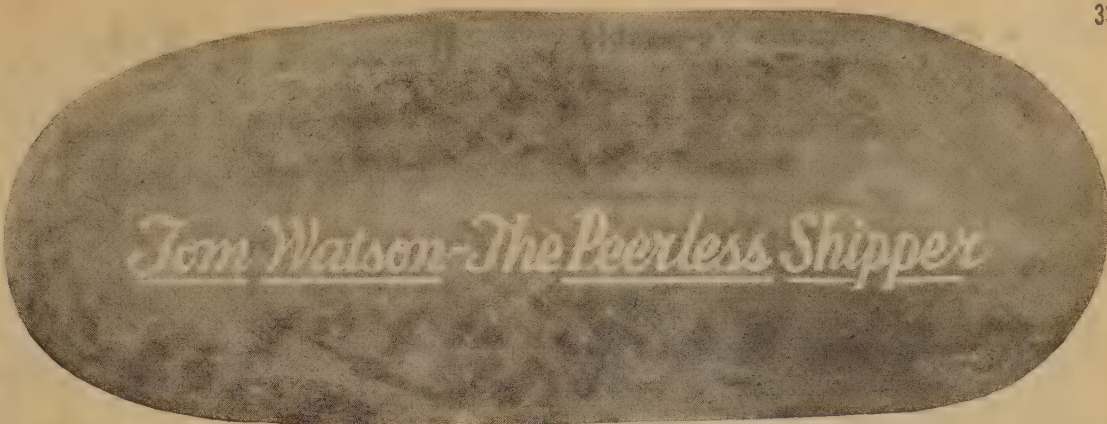

The melon is oblong in shape, about 20 inches in length by 10 to 12 inches in diameter. The skin is a rich dark green; the rind is thin and brittle, and for this reason the melon is not a good shipper to a distance beyond two or three hundred miles, but for home use and nearby market consumption it's got 'em all backed off the list. Our seed is all saved from hand selected, uniform, well shaped, fully matured, ripe melons. This extra care in selecting the melons from which the seed is saved costs a little more than the method generally used but it insures you seed of the highest quality with strong, vigorous germination. Pkt. 10c; oz. 17c; $\frac{1}{4}$ lb. 40c; $\frac{1}{2}$ lb. 65c; lb. \$1.10, postpaid.

About Condon's First of All Tomato

"Your First of All Tomatoes are wonderful. I made big money on my crop this year."—Fred G. Deishlie.

Gentlemen:

Dec. 25, Sioux Center, Iowa.

Gentlemen: I am sending you a cluster of your First of All Tomatoes, that I grew this year. This cluster contains ten large luscious tomatoes. Many clusters contained twelve to fifteen tomatoes. I don't see how the vine holds them up. They are the best I ever saw. I make big money on them.—Earl Mouck.

As we had a fine crop of your First of All Tomatoes we had about 2000 plants this year and harvested 500 Bushel of them. We want to praise them very highly, and besides that we enclose a photo of my husband holding a cluster in his hand with 42 well developed Tomatoes on it, and the same vine produced 84 more well grown Tomatoes, and the vine was full of blossoms. We were indeed very well pleased with them. Yours truly, Mr. & Mrs. Ed. Poel.

795 Purple-Top White Globe

(50 days.) An all-purpose variety extensively used for home and market-gardens and for shipping. Our celebrated strain produces almost perfect globe-shaped roots, purplish red on the upper part and creamy white at the base. Flesh is white, firm, crisp and mild-flavored. The broad green tops are of upright growth, medium large and strap-leaved. Our stock is famous for its uniformity and productivity.

SEED

Superior Quality

796 SIX WEEKS OR EARLY SNOWBALL (40 days)—Globe-shaped, white-skinned turnip. It is exceedingly productive. The flesh is fine grained, firm and of very delicate flavor. Best keeping of the white fleshed sorts. Very early, and particularly adapted for family or market use.

791 EXTRA EARLY PURPLE TOP MILAN (40 days)—The Earliest and Best Purple Top for Spring Sowing—Producing in 40 days good sized, flat, smooth turnips with bright purple top and few leaves, of perfect shape and color. Flesh white and choice, sweet and fine grained. They are without equal for the table.

792 EXTRA EARLY WHITE MILAN (40 days)—Remarkably early variety. Roots clear white, very smooth, flat, and are of best quality when only about 2 inches in diameter. Mild, sweet and tender.

798 SOUTHERN SEVEN TOP FOR TURNIP GREENS—Cultivated extensively for the tops and when cooked as spinach they are delicious. Very hardy. In many sections it is a favorite green feed for stock and its use as a pasture crop like Rape is quite general. Roots are woody and inedible.

794 EARLY PURPLE TOP STRAP LEAF (45 days)—A very early variety, extensively used for the table. The leaves are few, entirely upright in growth. The roots are flat, of medium size, purple or dark red above ground, white below. The flesh is white, fine grained and tender. Roots when in best condition for table use are about two and one-half inches in diameter. This sort is also known as Early Red Top Strap Leaved.

793 GOLDEN BALL OR ORANGE JELLY (60 days)—A beautiful bright yellow table turnip of medium size and universally sweet and delicious flavor.

790 EARLY WHITE FLAT DUTCH (45 days)—A very early white turnip, extensively used for the table. The leaves are upright in growth. The roots are of medium size, flat, white fleshed, fine grained and sweet. The roots when in best condition for table use are about 2½ inches in diameter.

800 YELLOW ABERDEEN (75 days)—Turnip of high merit. The flesh is yellow, tender, sugary and very solid. In color the turnip is purple above and deep yellow below. Used on the table or for stock feeding.

799 WHITE EGG (50 days)—An early, egg-shaped variety with smooth, clear white roots of medium size which grow half out of the ground. The tops are small with leaves distinctly cut. The flesh is clear white, firm, fine grained and sweet.

797 SHOGIN FOR GREENS—A new, extremely useful sort. It is quick growing and supplies large edible strap leaves as well as smooth globular roots of superior quality. Already popular as a dual purpose variety; also very desirable because of its resistance to aphids or plant lice.

789 COW HORN—A long white turnip, 12 to 15 inches in length, 2½ inches in diameter and growing well above the ground. Of rapid growth. One of the best and sweetest for home use or for stock feeding and excellent to plow under as a green fertilizer.

All Season APPLE ORCHARD

The Old Saying

"An Apple A Day Keeps The Doctor Away" Is No Idle Gossip

Nothing is more healthful for children and grown folks than one or two apples a day. This All Season selection offered here will give you a bountiful supply of delicious apples from early June until April or May of the following year. These are all strong 2 year old, well branched, 4 to 5 foot nicely rooted trees that will start growth immediately after you plant them and come into bearing in 3 to 5 years.

All Guaranteed to Please or Money Refunded

3343 Whitney—Listed among the "crabs" but really you can eat it just like an apple. Medium size fruit, red striped, fine quality. Makes wonderful apple butter. Bears young and heavily. Should be in every orchard.

3340 Anoka—Extremely Early. Bears fruit on one-year wood. Baby trees bear in the nursery row. Transplanted into the orchard, they bear the second year. Anoka was originated by Prof. N. E. Hansen in South Dakota and it has made good even up in North Dakota. A one-year-old tree sent to Fargo, North Dakota, ten years ago has borne eight crops in ten years. Anoka ripens in August, is similar in quality to Duchess. Large fruit, striped red, excellent flavor.

3331 Northwestern Greening—One of the best late cooking apples. Large, greenish yellow, tender, juicy, and rich, with an acid flavor; heavy yielder and excellent keeper.

3351 Beacon—New All-Red Early Apple. Another new Minnesota origination. Extremely hardy and productive. The uniform size and shape; the high color and quality, together with the keeping and handling quality, so different from most early Apples, make Beacon the outstanding early Apple for home and market.

3330 Red Northern Spy—Large fruit, red striped, mild sub-acid, with rich delicious juicy flavor. None better for cooking or eating. The tree is a vigorous grower, starts bearing early, producing heavy annual profitable crops.

3353 New Prairie Spy—A new long-keeping, super quality apple, so far superior to others marketed after Christmas, that a ready market awaits all that can be grown for many years. Very productive and fruit hangs well to trees. No finer quality anywhere.

My Garden and I

FOR more than a score of years, my garden and I have been good friends . . . friends that never bore, never impose and never inflict any penalties upon one another. We understand each other . . . and as a result . . . both of us flourish. But my garden is different from the average . . . vastly different.

For instance, in the average garden when one plants petunias, petunias come up and bloom . . . and if one plants radishes, radishes grow! But I repeat, my garden is different . . . I plant petunias, asters, zinnias and harvest in bountiful return . . . contentment, satisfaction, relaxation and appreciativeness.

In short, my garden gives me solace and quietude from a world of turmoil and strife . . . it is the one spot in my life, where, after the world extracts eight, ten and even twelve hours of physical and mental energy, I can gather to me a feeling of contentment, and rest, that try as I may, I cannot duplicate it in any other manner, believe me.

To start with, my garden is no different than that patch of ground outside your own doorstep . . . it starts out exactly the same as that . . . with dirt . . . the stuff for which children are scolded when they become too familiar with it . . . and yet, did you ever see a healthy normal youngster that didn't like to dig in the soil?

There's something warm and intimate in working with good growing-earth . . . and why not . . . does not life itself stem from the very earth? So, when I plant my garden I feel privileged indeed to stimulate to life the tiny live spark deep within each seed . . . I love seeds . . . small diminutive specks endowed by God with the power

to bring forth living testimony of Nature's greatness . . . it makes me stop and think . . . when I plant a seed! And when I realize that that privilege is mine, something inside me swells with a feeling that wipes away all man-made cares and tribulations.

Yes, gardening brings a man to his knees, right down to earth . . . and for most of us that's good . . . for too often do we walk among our fellow men with our noses held just a bit too high! But on your knees in contact with the moist soil, gently warmed by Spring's early sunshine, ah! that's the time you have a moment to yourself in which to relax and think about the worth-while things in life.

Oh, yes, the world passes by my garden and admires its beauty of color . . . its fragility of blooms and its generosity of crisp, health-giving vegetables . . . some of my friends and neighbors comment on the practical side of my gardening . . . even smack their lips in anticipation of preserved fruits and tasty vegetables, way out of season . . . and others perhaps envy my "savings." Yes, those things, the passing world sees and admires.

Perhaps that's why I smile to them and to myself when their words of praise ring in my ears, for little does the world know that the outward signs of my gardening are but the aftermath of the true harvest of gardening . . . the feeling inside, that you're glad that you're alive . . . that there's a God in Heaven . . . and that once again throughout the world shall re-echo the cry that "All's Well."

7 Glorious New Petunias

Petunia, Hollywood Star

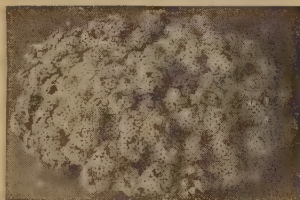

2387 Verbena, Hybrida Brightness.

A new variety with vivid color, a bright rosy, cerise scarlet, boldly contrasted with the rich white eye. Flower heads measure 2 3/4" across. Plants are semi-compact. Makes an excellent variety for borders or edging. Pkt. 25c.

Verbena, Brightness

2009 Alyssum, Violet-Queen. A charming new introduction. Plants, dwarf, compact, neat in habit and free flowering. The small sweetly scented flowers are a rich, deep shade of violet. Pkt. 15c.

Alyssum, Violet Queen

2016 Snapdragon, Ruby (Rust Resistant). Color, bright velvety carmine crimson. Florets are bold faced and form large tapering spikes. Excellent for cutting. Grows 18" to 20" tall, producing plants with base branching characteristics. Very uniform, both in color and plant growth. Pkt. 25c.

2017 Snapdragon, Amber and Gold (Rust Resistant). A mass planting of Amber and Gold makes an immediate impression. Plants glisten with a pleasing suffusion of pastel colorings. The blooms show florets with full golden yellow lips and hoods of golden amber. Plants grow 18" tall and produce 10 to 12 sturdy base branching spikes, each spike being as long as the plant is tall. Makes an ideal cutting variety. Pkt. 25c.

Zinnia, Crown O' Gold

Nasturtium, Indian Chief

2283 Petunia, Hollywood Star. This is a charming shade of rich rose with an amber throat. It is unique in the form of its flower, which consists of a five-pointed star. Vigorous grower, early and free flowering. Pkt. 15c.

2284 Petunia, Miniature Violet Gem. The plants are neat, dwarf and compact. The blooms are 2 inches across, blooming, almost to a fault, because throughout the season the rich violet-blue blooms are so plentiful that they all but completely hide the clean, dark green foliage. Pkt. 15c.

Petunia, Maculata

2285 Petunia, Maculata (Balcony Type). Coloring, delicately toned from a pure white base to spots of deep rose-red on the outer fringe of each large semi-ruffled flower. Maculata has an open golden yellow throat, with exquisite vein markings spreading outwards to the edge of each flower where they are suffused with gaudy rose-red stripes. Pkt. 15c.

2286 Petunia, Hybrida Radiance. There is more rich brilliancy and life in the color of Radiance than in any other Petunia. A cerise-rose with enough outlying salmon to remove the harshness commonly found in a cerise-rose, without losing the brilliancy, in fact seeming to intensify it. The throat of the large 2 1/2" to 3" blooms are golden yellow where the bloom starts to flare which adds warmth and life to the general color. Pkt. 15c.

Petunia, Topaz Rose

2288 Petunia, Macdonald's Single Fringed DeLuxe Fluffy Ruffles Mixed. A delightful mixture of delicate light shades, containing numerous soft tints, veined and bi-colored combinations not found in the separate colored varieties. All flowers are finely fringed and so heavily ruffled that they appear double. This is by far the finest Petunia for home gardens. Pkt. 35c.

2287 Petunia, Topaz Rose. One of the most vivid colored of the small, single flowered Rose Petunias. Color is a fiery rose, delicately suffused with gold, strongly contrasted with the topaz throat. Extremely free blooming, providing a brilliant patch of color throughout the season. Pkt. 15c.

Petunia, Fluffy Ruffles

2289 Petunia, Celestial Rose. This single dwarf, small flowering Petunia is an improvement on Rose of Heaven. Very compact in growth, profuse bloomer. Color, a beautiful rich satiny rose. Very showy, always admired. Pkt. 15c.

Petunia, Celestial Rose

3 Charming New Snapdragons

2015 Snapdragon, DuBarry (Rust Resistant). Color, flame salmon-rose with gold shadings that serve to heighten its intensity. Grows to a height of 18" and produces compact, base branching plants. Both as a cut flower and for bedding, we feel certain that DuBarry will go far in the growing popularity of Snapdragons. Pkt. 25c.

2016 Snapdragon, Ruby (Rust Resistant). Color, bright velvety carmine crimson. Florets are bold faced and form large tapering spikes. Excellent for cutting. Grows 18" to 20" tall, producing plants with base branching characteristics. Very uniform, both in color and plant growth. Pkt. 25c.

2017 Snapdragon, Amber and Gold (Rust Resistant). A mass planting of Amber and Gold makes an immediate impression. Plants glisten with a pleasing suffusion of pastel colorings. The blooms show florets with full golden yellow lips and hoods of golden amber. Plants grow 18" tall and produce 10 to 12 sturdy base branching spikes, each spike being as long as the plant is tall. Makes an ideal cutting variety. Pkt. 25c.

2546 Zinnia, Super Crown O' Gold, Pastel Tints. A glorious new Zinnia. Flowers are large and showy, 5" to 5 1/2" in diameter with a profusion of stately blooms comprising the choicest Pastel Tints of soft yellow, old gold, light pink, apricot, salmon, white, cream and buff. Plants robust, 3 ft. tall. Bloom all summer. Pkt. 15c.

Snapdragon, DuBarry

2282 Nasturtium, Indian Chief. New color in dwarf, semi-double Nasturtiums—brilliant scarlet. Flowers grow 2 1/2" to 3" across and are borne most profusely on long stems above the dark foliage of the bushy plant. This is a lovely shade for cut flowers; nice in beds, borders and edgings. Pkt. 10c.

Phlox, Rosy Morn

2323 Phlox, Gigantea Rosy Morn. This new variety produces blooms larger than a half dollar. Color, combination of rose-pink with white eye. Makes a glorious bedding variety. Pkt. 25c.

2239 Marigold, All-American Mixture. Supreme mixture of all the latest introductions in Marigolds. Pkt. 10c, 1/4 oz. 35c, 1/2 oz. 55c, oz. \$1.00.

8 Beautiful New Marigolds

2262 Marigold, Dwarf French Quilled Sun-Beam. This is not an ordinary Marigold but is in the new quilled or Scabiosa flowered class. Plants grow 15" in height and are 20" in diameter. Sun-Beam blooms early and is very prolific producer of tightly quilled golden orange flowers. Each floret will average about 1 1/2" in diameter. The guard petals show small brown flakes at their base, which makes an exceedingly attractive combination with the bright golden orange tones. Pkt. 25c.

2263 Marigold, African Little Giants, Mixed. These compact little plants grow to a height of 15", making an ideal border or bedding plant. Color range from lemon to orange with many shades of each. Each plant will have as many as 25 large 4" flowers open at one time. Pkt. 25c.

2264 Marigold, Bodger's Pot O'Gold. The early continuous flowering plants are dwarf and compact, growing 12" to 15" in height. Very neat in appearance and bearing a dozen or more double blooms, 4" to 4 1/2" in diameter. Color, a most penetrating shade of bright deep golden orange. Wonderful for bedding or may be used as a cut flower as the stems are 12" in length. Pkt. 25c.

2261 Marigold, Mission Giant Goldsmith. A new and distinct type Medium height with giant Chrysanthemum blooms 4" to 5" in diameter. Blooms are almost a perfect ball. They remind one of the giant incurved Chrysanthemums. A gorgeous new annual. Pkt. 25c.

2243 Marigold, Bodger's New Dwarf Harmony Hybrids. Earliest of all Dwarf types. Plant 12 to 14 inches high, flowers double, continuous bloomer. Blooms 1 3/4 to 2 inches across. Almost odorless. Color range golden yellow, blotched and striped orange, and dark maroon. Perfect for bedding or cut flowers. Pkt. 15c.

It is a brilliant crimson shade which goes well with the massiveness of the blossoms. Pkt. 10c; 1/8 oz. 35c; 1/4 oz. 65c; 1/2 oz. \$1.10; oz. \$2.00.

2023 Giant California Sunshine Asters—Choicest Mixed

Striking flowers, 4 in. and more across, are freely borne on stiff stems, 18 to 20 in. long. Pkt. 10c; 1/8 oz. 35c.

2025 New Peerless Yellow Asters

It has been difficult to get a good yellow Aster. We have been working constantly for several years and have at last developed one that is quite good. It can be described as of American Branching habit, height about two feet, flowers of good size and form, petals slightly incurved, but no trace of quills as in the earlier forms of the yellow Aster. The color is a deep yellow when first opened and fades slightly as it ages. Pkt. 10c; 1/8 oz. 35c.

2022 Giant Branching Asters

Choicest Mixed Colors

From midseason until frost these Asters will produce a profusion of beautiful flowers. The blooms are quite large, 3 1/2 to 4 in. across, and fully double, with the petals somewhat incurved and massed so closely as to form a most attractive, globular flower. The plants grow 2 to 3 ft. tall and branch freely, producing stems frequently 2 ft. long, which makes this class especially fine for cutting. Nothing could be more dazzling than a blaze of color such as these giant flowers will give. Pkt. 8c; 1/4 oz. 40c; 1/2 oz. 70c; oz. \$1.25.

Hardy Profitable Grasses for Hay and Pasture ⁷⁷

1390 REED CANARY GRASS

Makes 2 Cuttings Per Season—Yielding 5 to 7 Tons Per Acre
Especially Suited to Boggy Soils, Swamps and Marshes.

Excellent for pasture and grazing—makes 2 cuttings a season—yielding 5 to 7 tons per acre. Valuable new perennial hay and pasture crop especially desirable for low, marshy land. Nothing like it has been thus far produced as it puts land that is just a dead waste into production of valuable forage. Continues to grow without care or attention. Highly recommended by the Wis. and Minn. Experiment Stations.

CULTURE. Sow in early spring, alone or with grain, 4 to 6 pounds of seed per acre broadcast, or 2 to 3 pounds with drill. Late summer and late fall seeding are also recommended. It makes a permanent grass when once established. **Postpaid, ½ lb., 30c; lb., 50c; 3 lbs., \$1.40; 5 lbs., \$2.20.** Not Prepaid, 10 lbs., \$3.35; 25 lbs., \$8.00; 50 lbs., \$15.50; 100 lbs. and over @ \$30.00 per 100 lbs.

1390 Reed Canary Grass

1377 ORCHARD GRASS

A valuable grass for pasture or hay land, and on account of its earliness especially valuable for a permanent pasture. It furnishes green grass very early in the spring and until late in the fall. When closely cropped it grows up very quickly and is ready for grazing again in ten to twelve days. It is succulent and nutritious, furnishing excellent pasture or hay. When grown for hay, two good crops can be obtained in one season. Sow 20 lbs. per acre. **Postpaid, ½ lb., 30c; lb., 55c; 3 lbs., \$1.50; 5 lbs., \$2.25.** Not Prepaid, 10 lbs., \$3.80; 25 lbs., \$9.00; 50 lbs., \$17.50; 100 lbs. and over @ \$34.00 per 100 lbs.

These are all Perennial Grasses; when once established will live for years. We recommend sowing 20 lbs. per acre when seeded alone or equal proportions as a mixture recommended above. 1224 BLUE GRASS—FANCY KENTUCKY

Good pastures are profitable; poor ones are money losers. The government recognizes this in AAA by paying up to \$1.50 per acre for reseeding old pastures with adapted grasses. Kentucky Blue Grass is an adapted grass to a wide area. It will pay handsome dividends to reseed old pastures or start new ones with this high quality seed. Our Kentucky Blue Grass Seed is all new crop, double remilled, extra heavy, fine, bright seed of high purity and strong germination. We recommend sowing 25 to 35 lbs. per acre alone or in combination with Red Top and Orchard Grass. For making a beautiful permanent lawn, sow at the rate of 1 lb. to 200 square feet. **Postpaid, ½ lb., 25c; lb., 45c; 3 lbs., \$1.25; 5 lbs., \$1.95.** Not Prepaid, 10 lbs., \$2.65; 25 lbs., \$6.25; 50 lbs., \$12.25; 100 lbs. and over @ \$24.00 per 100 lbs.

1254 CLOVER—WHITE DUTCH

Fancy Recleaned Native Seed

White Clover is a low, smooth, perennial herb arising from a straight tap root. The plant possesses creeping stems which develop adventitious roots at the nodes. It is this feature which enables clover to spread rapidly and which makes it so desirable in lawns and playing grounds. It withstands greater temperature extremes than either Red Clover or Alsike. Naturally suited to cool, moist regions, it is also rather tolerant of shade. **Postpaid, ¼ lb., 35c; ½ lb., 65c; lb., \$1.25; 3 lbs., \$3.50; 5 lbs., \$5.25.** For larger quantities write for special prices.

1399 RYE GRASS AMERICAN GROWN

For Early Seeding and Quicker Crops

If you want a quick hay or pasture crop this year, Rye Grass fills the bill. It starts quickly and keeps on the job all summer. It produces lots of feed. It is a grass somewhat like Kentucky Blue Grass, only it grows much taller and the leaves are broader. Experiment Stations recommend using Rye Grass. It is becoming more popular every year. Sow 20 to 25 lbs. per acre when sown alone. **Postpaid, ½ lb., 20c; lb., 35c; 3 lbs., 95c; 5 lbs., \$1.45.** Not Prepaid, 10 lbs., \$1.35; 25 lbs., \$3.25; 50 lbs., \$6.25; 100 lbs., and over @ \$12.00 per 100 lbs.

1336 CREEPING BENT GRASS—Seaside Strain

This strain of American Grown Bent Grass is recognized as the finest quality obtainable. It is especially suited for lawns and golf courses, being perfectly hardy, producing a dense velvety green carpet that withstands much trampling. For putting greens on golf courses, it is generally sown in beds and when established, dug up and the stolons, or individual plants are set in the putting greens 4 or 5 inches apart, as it spreads rapidly and eventually makes a solid turf of the finest texture of low growing grasses. For seeding in home lawns, we prefer sowing the seed at the rate of 1 lb. to 200 square feet. **Postpaid, ½ lb., 70c; lb., \$1.25; 3 lbs., \$3.60; 5 lbs., \$5.75.** For Larger Quantities Write for Special Prices.

1231 Bromus Inermis "Purity Brand" Hardy Perennial

Marvelous drought defying hardy grass that makes excellent combination hay, seeded alone or with Alfalfa. Recommended by the Michigan Experiment Station. Sow in spring or in early August 5 lbs. of Bromus with 10 lbs. of Alfalfa. Don't pasture until fairly good top growth develops. Cattle will actually eat the Bromus Grass first, allowing the Alfalfa better chance to get established. If seeded alone sow 20 lbs. per acre. Has given excellent satisfaction even on light sandy soils in northern Michigan. An extremely hardy perennial grass we highly recommend either for hay or pasture. Postpaid, $\frac{1}{2}$ lb., 30 cts.; 1 lb., 50 cts.; 3 lbs., \$1.40; 5 lbs., \$2.20. Illustration to left shows field of Canadian Peas and Oats yielding 5 tons per acre 60 days from planting.

Canadian Field Peas and Oats seeded in the early spring at the rate of 1 bushel of each per acre, makes the best extra early annual hay crop. Canadian Field Peas are extremely hardy; therefore may be seeded very early along with your Oats. They may be broadcast or sown with a grain drill, but be sure to cover the seed about 1/2 inch deep in either case. If you want this for a hog pasture suggest you add 5 lbs. of Essex Dwarf Rape per acre. Postpaid, lb., 25 cts.; 3 lbs., 60 cts.; 5 lbs., 85 cts. 1413 Sudan Grass Wonderful Quick Hay Crop

One of the best annual forage plants ever introduced, suitable for almost any locality. Sudan Grass thrives best on rich loam, but has been successfully grown on almost every kind of soil, from heavy clay to light sand. Cold, wet, boggy soils are not suited to Sudan Grass.

Sudan Grass is a sorghum, and an annual, without underground root sprouts. It grows 4 to 5 feet high in drilled seedings, and 5 to 8 feet in cultivated rows. Do not sow Sudan Grass before corn planting time. Like corn, it is a warm weather crop. In favorable seasons, the growing period is long, and several cuttings can be obtained in one season. For hay it is ready to cut in 60 to 75 days, when it is in full head. It continues its growth, and in 40 to 45 days it is ready for another cutting.

Sudan Grass is an enormous yielder, producing 3 or 4 tons of hay at the first cutting. The second cutting is lighter, and the hay is much finer. Live stock of all kinds will eat the hay readily.

For hay, sow at the rate of 20 to 30 lbs. per acre, using a grain drill, and cover from one to one-half inches deep. Heavy seeding makes finer quality hay. Postpaid, lb., 25 cts.; 3 lbs., 60 cts.; 5 lbs., 90 cts. Not Prepaid, 10 lbs., 65 cts.; 25 lbs., \$1.25; 50 lbs., \$2.35; 100 lbs., \$4.50; 200 lbs. and over @ \$4.35 per 100 lbs.

Condon's Northern Grown High Yielding Seed Oats-Rye-Speltz-Barley and Spring Wheat

1410 Speltz or Emmer

(40 lbs. Bu.)

Sow $1\frac{1}{2}$ to 2 Bu. per Acre

A valuable grain, closely related to wheat; the kernels, however, are tightly enclosed in the hulls or husks, and these adhere to the grain when it is threshed. Speltz is becoming more popular every year, as it produces good crops even under adverse circumstances where other grain fails. It withstands more dry weather than any other grain, and produces more food value per acre than any other cereal, while it is a most valuable feed for all kinds of stock. It can be fed to horses, the same as oats, with the hulls on. Speltz can be grown on most any kind of soil, rich or poor, wet or dry, as it will not lodge like other grain because of the stiff and strong straw. It will always bring the best returns. Postpaid, lb., 22c; 3 lbs., 55c; 5 lbs., 70c. Not Prepaid, $\frac{1}{2}$ bu., 90c; bu., \$1.65; 2 to 5 bu. @ \$1.60 per bu.; 5 bu. and over @ \$1.55 per bu.

Originated by the Wisconsin Experiment Station. Remarkably heavy yielder producing over 70 bushel per acre. The very finest for malting purposes. Its smooth beards, resistance to hot weather, and heavy yielding qualities make it the most outstanding variety. 1396 Rye—Mammoth Spring

(56 lbs. Bu.)

Sow 2 Bu. per Acre

A Most Profitable Crop. Quite different from Winter Rye; highly valued as a catch crop. It is not only more productive, but the grain is of finer quality, grown in any latitude. Straw is of special value as it stands 5 or 6 feet high, being better than that of Winter Rye and producing nearly four times as much straw as Oats. Produces 30 to 40 bushels of grain to the acre. As it does not stool like Winter Rye, not less than two bushels to the acre should be sown. Postpaid, lb., 22c; 3 lbs., 55c; 5 lbs., 70c. Not Prepaid, $\frac{1}{2}$ bu., \$1.10; bu., \$2.00; 2 to 5 bu. @ \$1.95 per bu.; 5 bu. and over @ \$1.85 per bu.

1347 Hog Pasture Mixture (Annual)

Especially prepared for quick results and a full crop. This mixture is composed of the following annual varieties: Peas, Soy Beans, Vetches, Crimson Clover, Rape, Sugar Cane, American Millet, Turnips, Rutabagas, Speltz, Rye and other grains and forage plants, all in the right proportion. This mixture will provide an abundant pasture within six weeks from day of sowing the seed, continuing green and bountiful until destroyed by frost. Almost all of these varieties will come up again as fast as they are eaten down and will furnish 4 to 5 times as much forage as can be obtained from any clover-grass mixture, and this food is succulent and nutritious and much relished by hogs. It will keep them healthy and strong and they will gain in weight easily and quickly. This mixture will prove a most profitable investment for every farmer. It is usually sown about corn planting time, but can also be sown as a catch crop any time during the season until August. Sow 50 lbs. per acre. Postpaid, lb., 25c; 3 lbs., 65c; 5 lbs., \$1.00. Not Prepaid, 5 lbs., 80c; 10 lbs., \$1.35; 25 lbs., \$2.75; 50 lbs., \$4.95; 100 lbs., \$9.50; 200 lbs. and over @ \$9.25 per 100 lbs.

1371 New Vanguard (Type)

This remarkable high yielding, rust resistant new Oat is a cross between Banner and Hajira and was originated by the Canadian Rust Research Laboratory, University of Manitoba. In checking the results of Vanguard Oats sown in the Central States last year, we find that it was the highest yielding variety at the University of Illinois trial plots at DeKalb, Illinois. In other plantings close to Rockford, it really stood at the top of the list in quality and yield. Some reports show yields from 75 to 160 bushels per acre but it is our judgment, based on experimental comparisons, that an average yield of 65 to 70 bushels per acre in this section of the country is about the top that you could expect. Seed supply is limited with very active demand. Postpaid, lb., 20c; 3 lbs., 50c; 5 lbs., 65c. Not Prepaid, $\frac{1}{2}$ bu., 65c; bu., \$1.15; 2 to 5 bu. @ \$1.10 per bu.; 5 to 10 bu. @ \$1.05 per bu.; 10 bu. and over @ \$1.00 per bu.

Postpaid, lb., 20c; 3 lbs., 50c; 5 lbs., 65c. Not Prepaid, $\frac{1}{2}$ bu., 65c; bu., \$1.15; 2 to 5 bu. @ \$1.10 per bu.; 5 to 10 bu. @ \$1.05 per bu.; 10 bu. and over @ \$1.00 per bu.

Hundreds of Farmers Write Like These Two

Gentlemen: Please send one and one-half bushels Condon's "Silo King" Seed Corn. We have used this corn the past two years with very good results. We find it an exceptionally good ensilage crop as it grows tall and large and produces large ears. Last year we put up 165 tons silage from seven acres, while before this we always used 15 to 20 acres and even then we have failed to fill the silos.

CRYSTAL SPRINGS DAIRY, C. L. Burch, Neosho, Missouri.

I cannot help but write you regarding my silage which was produced from your Silo King Corn. It is simply marvelous. The extra large ears and leafy stalks made the most wonderful silage I have ever grown. I will buy your Silo King Corn every year. Stalks grew very tall producing better than 40 tons per acre and the most wonderful silage one could wish for. This certainly is a big profitable cropper and I will recommend it to my neighbors.

1404 New Mukden

Late introduction by the University of Iowa. Here is a new variety of Soy Beans that has produced unusually large yields in Northern Indiana, Illinois and Iowa, many fields averaging as much as 40 bushels per acre. The Mukden usually has three beans in a pod. The pod starts six inches from the ground. The plant grows about six inches taller than Illini or Manchu and matures about 10 days earlier. This is a yellow-seeded variety which is the universal favorite as a market sort. Supply of seed is limited so order early please. **Postpaid, 1 lb. 25c; 3 lbs. 60c; 5 lbs. 85c.**

Dependable Crop For Hay Even Under Most Extreme Weather Conditions. Big Money In Them For Commercial Markets—Plant a Big Acreage This Year.

1402 Illini Soy Beans (105 Day Bean)

Illini was developed at the Illinois Experiment Station. It has been constantly increasing in popularity. It seems to grow a little taller than Manchu, giving a heavier yield while, in season, it is a few days earlier. Just as desirable in every other way and we would say better for hay in Northern Illinois, Michigan or Wisconsin. **Postpaid, 1 lb. 25c; 3 lbs. 60c; 5 lbs. 85c.**

1403 Manchu Soy Beans (110 Day Bean)

This is by far the most popular Soy Bean in the middle west. It is a medium early variety, and it matures dry beans in about 110 days. The Manchu was almost unanimously considered to be the best of all Soy Beans for any purpose until the introduction of Illini. Seeds are yellow with a peculiar black seed scar. We recommend this variety for hay and silage, and as being one of the best to plant with corn for silage. **Postpaid, 1 lb. 25c; 3 lbs. 60c; 5 lbs. 85c.**

Condon's Golden Harvest

An Ideal Variety for Northern Illinois, Indiana, Ohio, Iowa

A splendid corn to sell in market on the ear. Will produce a satisfactory crop with less favorable conditions than those required by Reid's Dent. In numerous tests on both good and poor soil we have found that it responds to good soil and cultivation with an immense yield; it will also produce more corn with ordinary treatment than any other large-eared variety. The plant is ideal, the stalk being about eight feet high with abundant broad leaves and so well rooted that it withstands wind storms extra well. Ears are borne uniformly at about four feet from the ground, high enough to get at the sun and air, low enough to be protected from wind storms and just right for husking. The shank is long, allowing the ear to droop when maturing, thus shedding the rain instead of holding it in the husk. The ears are large, 10 to 12 inches long, nearly cylindrical, holding their size well to the end and well rounded or capped over at both ends.

Condon's Golden Harvest

Reid's Yellow Dent

Reid's Yellow Dent

Leading standard yellow variety originated many years ago by Mr. James L. Reid of Illinois, who fixed a type that experts have failed to change for the better. In our opinion the most popular sort of yellow corn grown in the United States. We offer pure type of this leading standard variety, which is among the best all around purpose Yellow Dent Corns grown.

Description—Color deep yellow, with lighter cap. Grain very deep, closely packed; butt and tips almost entirely covered. Slightly rough, with grains dented on top. Leaves and stalks of Reid's Yellow Dent make the finest ensilage and fodder. Matures in 110 days.

Murdock Yellow Dent

Wisc. No. 13

Murdock Yellow Dent is of a deep yellow color, ears $8\frac{1}{2}$ to 9 $\frac{1}{2}$ inches in length, hard and solid, just slightly rough and very uniform in type. It makes a large heavy growth of stalk and leaf and so it is a good silage variety. Murdock is not a whole lot different from Golden Glow but it grows a trifle larger both in stalk and ear and yields a trifle more.

Extra Early Flint Varieties for Hogs—75 to 80 Days

Improved Yellow Yankee Flint Corn

KING PHILIP RED FLINT. This extra early corn is eight-rowed and one of the most reliable and productive varieties for the Northwest. The ears grow 12 inches long. Stalks produce two and sometimes three good large ears. Not nearly as hard as ordinary Flint Corn. The stalks grow about 7 feet in height and are very leafy, therefore valuable for fodder.

LONGFELLOW YELLOW FLINT. A Beautiful cob of rich, glossy yellow, and very long—ten to fifteen inches. The stalks grow to the height of 7 to 7 $\frac{1}{2}$ feet, and the ears are borne about three feet from the ground.

SANFORD'S WHITE FLINT. The ears are of unusual length, twelve to fifteen inches, smooth and symmetrical shape, of a flinty white color. Stalks grow very tall, usually having two to three ears. It is a splendid variety for fodder.

Silver King (Wisconsin No. 7)

By Far the Best White Dent for Wisconsin, Northern Illinois and Iowa Silver King is not only the best white variety but one of the best and heaviest yielders of all varieties of corn for the Northern states. It is a big yielder. The Official Description from Wisconsin College of Agriculture Corn Bulletin No. 170, is as follows: "This variety is a uniform creamy white in color and has a slight roughness of kernel. The cob is glistening white. The length of ears varies from 7 to 10 inches. The standard length is from 8 $\frac{1}{2}$ to 9 $\frac{1}{2}$ inches.

Boone County White

One of the outstanding large yielding varieties of White Corn, producing on an average from 70 to 90 bushels per acre under favorable conditions. Ears 9 to 11 inches long, 18 to 22 rows. Grain very deep, little rough. Extremely attractive Corn both on the ear and shelled. Prize winner in many markets. 120 day corn.

Iowa Silver Mine

Identical in characteristics with Iowa Gold Mine. Recognized as one of the large yielding, drought resisting White varieties of Corn. Especially suited for Central and Southern Corn Belt. Makes an ideal silage or fodder Corn.

The New "G" Hybrids for 1942 Are Better Than Ever

The outstanding "G" hybrids for 1942 plantings represent the best the industry has produced for the North, South, East, West and Central corn belt.

We have tested these hybrids on good soil and thin soil, on upland and bottom land. There is no one hybrid, nor any two or three hybrids, which suit every requirement of soil and climate across the corn belt. That is why working with co-operative growers who have been furnished foundation stock for varieties adapted

to your location we are able to produce a large number of hybrids. Each "G" hybrid is bred and grown to meet a specific condition of soil and climate.

The fine hybrids we offer to our customers this year have not just happened. They are the result of many years of trial, of testing, of throwing away the less desirable and saving only those high yielding, high quality hybrids that stand adversity, wind, storm, drought, cold and insect pests.

Beautiful Hardy Ferns

Hardy Ferns planted among your shrubbery, in the perennial border, or in the foundation planting around your house, especially on the north and east side or under tall trees, bring to your home a fragrance from the wild woods, in some of nature's most beautiful creations. Plant in groups of at least 3 to 5 each of each variety, scattered at irregular distances.

American Arborvitae

Forest Trees for Wind Breaks

For Erosion Control, Soil Conservation, Wood Lots and Wind Breaks no trees will give customers as quick results as Chinese Elms, Black Walnuts and Evergreens. Chinese Elms lead for quick growth. Will average almost five feet a year after they are established. Black Walnut and Evergreen follow in rapid growth as listed. For wind breaks we recommend planting 100 feet away from house, setting trees 6 to 8 feet apart in the row and rows 8 to 10 feet apart. Plant in zigzag fashion for best protection.
